## NABÍDKA VZROSTLÝCH SAZENIC STROMŮ

Níže přinášíme naši nabídku vzrostlých stromů. Pokud v ní nenaleznete to, co hledáte, poptejte nás a pokusíme se Vámi poptaný druh či velikost sehnat. Ceny zde uvedené jsou bez DPH 15% a jsou orientační. Při konkrétní poptávce nebo větších odběrech můžeme zajistit často ceny lepší (vč. dodání zdarma na místo výsadby). Kromě stromů nabízíme i celý sortiment výsadbového materiálu (kotvící kůly, půlené kůly, jutu, rákosové rohože, vyvazovací pásky, mulč, substráty, hnojiva atd.). V případě zájmu zajišťujeme i samotnou výsadbu.

### Poptávky a objednávky:

Směřujte na níže uvedené kontakty:

e-mail: [info@arbocom.cz](mailto:info@arbocom.cz)

tel.: 777 900 519

### Odběrná místa:

Sazenice lze odebrat v termínech dle dohody buď na našem středisku ve Vrčeni u Nepomuka nebo ve spolupracujících školkách na Mělnicku či Prostějovsku.

### Doprava sazenic na místo výsadby:

Lze dohodnout individuálně. Ceny za dopravu jsou různé, záleží na lokalitě dodání a počtu objednaných sazenic. Při větších odběrech, nebo pokud lokalita leží na naší rozvázkové trase, je dodání velmi levné nebo zcela zdarma.

### Vysvětlivky:

**OK** = obvod kmene v cm (tedy např. OK 6-8 = že sazenice má v 1m nad zemí kmen o obvodu 6-8cm), tento údaj se používá u sazenic se zapěstovanou korunou, která je nasazena na kmeni ve výšce cca 180 – 250cm nad zemí

**VS** = výška stromu v cm (tedy např. VS 250-300 = že sazenice je 250-300cm vysoká), tyto sazenice jsou zavětvené od země.

**Prostokořenné** = sazenice prosté kořenového balu. Mají pouze holé kořeny bez zeminy, lze je expedovat v době vegetačního klidu, pokud není zamrzlá půda. Běžně se expedují od

začátku listopadu do zámrazu (často až do Vánoc) a na jaře po rozmrznutí půdy do cca 15. dubna.

**Zemní bal** = sazenice se zemním balem. Bal je fixován pletivem. Toto pletivo se při výsadbě ponechává a neodstraňuje se (mohlo by mít za následek rozpadnutí balu). Běžně se expedují od konce října do zámrazu (často až do Vánoc) a na jaře po rozmrznutí půdy do konce dubna. Tento typ sazenic je při výsadbách nejpoužívanější.

**AIRPOT** = obdoba sazenic se zemním balem. Tyto jsou ale pěstovány tak, aby byly podobně jako kontejnerované dřeviny expedovatelné během léta. Sortiment těchto je omezený a sazenice jsou kvůli technologii pěstování dražší. Běžně se expedují od června do října.
